

INTER-OFFICE MEMORANDUM

PRINCE GEORGE'S COUNTY POLICE DEPARTMENT

DATE: January 22, 2025

TO: Lakisha Hull, Director, Prince George's County Planning Department, MNCPPC

FROM: Malik Aziz, Chief of Police, Prince George's County Police Department 

RE: Police Report for Guideline for the Mitigation of Adequate Public Safety Facilities:
Public Safety Infrastructure

In accordance with Section 24-4508(b)(2)(B) of the Prince George's County Code, the Police Department is submitting the attached report that shows the average response times for emergency and non-emergency calls for each month of 2024.

This report has been revised to include response time averages for each Police division, sector, beat, and reporting area.

The Joint Analysis Intelligence Center revised the method by which response times are calculated in 2024. The new method excludes officer-initiated calls and any other records missing timestamps that correspond to when an officer was first dispatched and when the first officer arrives on scene. As a result, some of the response time calculations at the Division-level have increased. Fortunately, this new method allows us to calculate response times more precisely for specific areas. The attached report shows average call response time all the way down to individual reporting areas. In addition, the JAIC has the ability to calculate average response times for the vicinity immediately surrounding a proposed development site.

A. SUMMARY

This report will summarize the 2024 patrol division response times for the Prince Georges County Police Department, along with the challenges and factors that impacted the response times. Municipal boundaries are highlighted on the enclosed maps for reference only. Municipal agency response times are not included in this report.

B. ANALYSIS

The Bureau of Homeland Security's Joint Analysis Intelligence Center (JAIC) has revised the process by which police response times are calculated. This is a synopsis of the changes we have made and the challenges we face in our ongoing effort to ensure that the response time numbers are accurate.¹

i. CHANGES

- We are now excluding officer-initiated calls for service records.
 - These are incidents such as traffic stops, which are not a result of a complaint from a member of the public. These incidents also have artificially low response times, as the officer is already on scene when the dispatcher is notified. Including these incidents would artificially lower the response time calculation.
- We are now excluding any call record that is missing one or both of the timestamps required for an accurate calculation.
 - These timestamps represent the time that (1) the incident was first dispatched to and officer, and (2) the time at which the first police unit arrives on scene.
- We have redefined the list of incidents that qualify as "emergency" calls for service.
 - County Code 24-122.01 requires separate response times for "emergency" and "non-emergency" calls for service, but it does not define either term. We are now defining "emergency" calls as those calls listed in the PGPD General Order Manual as being assigned a priority response. Our goal with this definition is to ensure that the "emergency" response time is calculated mainly from calls for service to which a large proportion of officers will respond "lights and sirens" to arrive on scene quickly.
- Exclude any call for service that falls within the boundaries of any municipal corporation.

¹ PGPD Memorandum: Response Time Calculations – Changes & Challenges, 9/5/2024

ii. CHALLENGES

There are several challenges that we are trying to address to ensure that our response time calculation is accurate and consistent.

- Missing timestamps
 - The PremierOne CAD system relies on a dispatcher to take an explicit action to populate the timestamp values required to calculate the response time. The CAD system does not use GPS and unit/incident positioning to automatically determine when a unit is in the vicinity of the call. Currently, only 36% of call for service records that would otherwise qualify to be used to calculate response times have both timestamp values required for the calculation.
- Distinguishing between “Emergency” and “Non-Emergency” calls.
 - Ideally, this distinction would be made simply by determining whether the officer responded priority (meaning, lights & sirens). This is the distinction that matters: how fast can the officers arrive on scene if exercising all the privileges to which an emergency vehicle is entitled. This distinction cannot be made simply by call type; calls of the same type can have factors that make one call an emergency and another call routine.

iii. FUTURE CHANGES

We are exploring technology that can help us address both challenges described above. If, for example, we had a system that (1) automatically reported the location of each police vehicle, and (2) automatically reported when the unit’s emergency equipment is activated, we would have reliable indicators that are not subject to human error. The JAIC will continue to explore every avenue available to ensure that our response time calculation is as accurate as possible.

UNIQUE CHARACTERISTICS IMPACTING RESPONSE TIMES

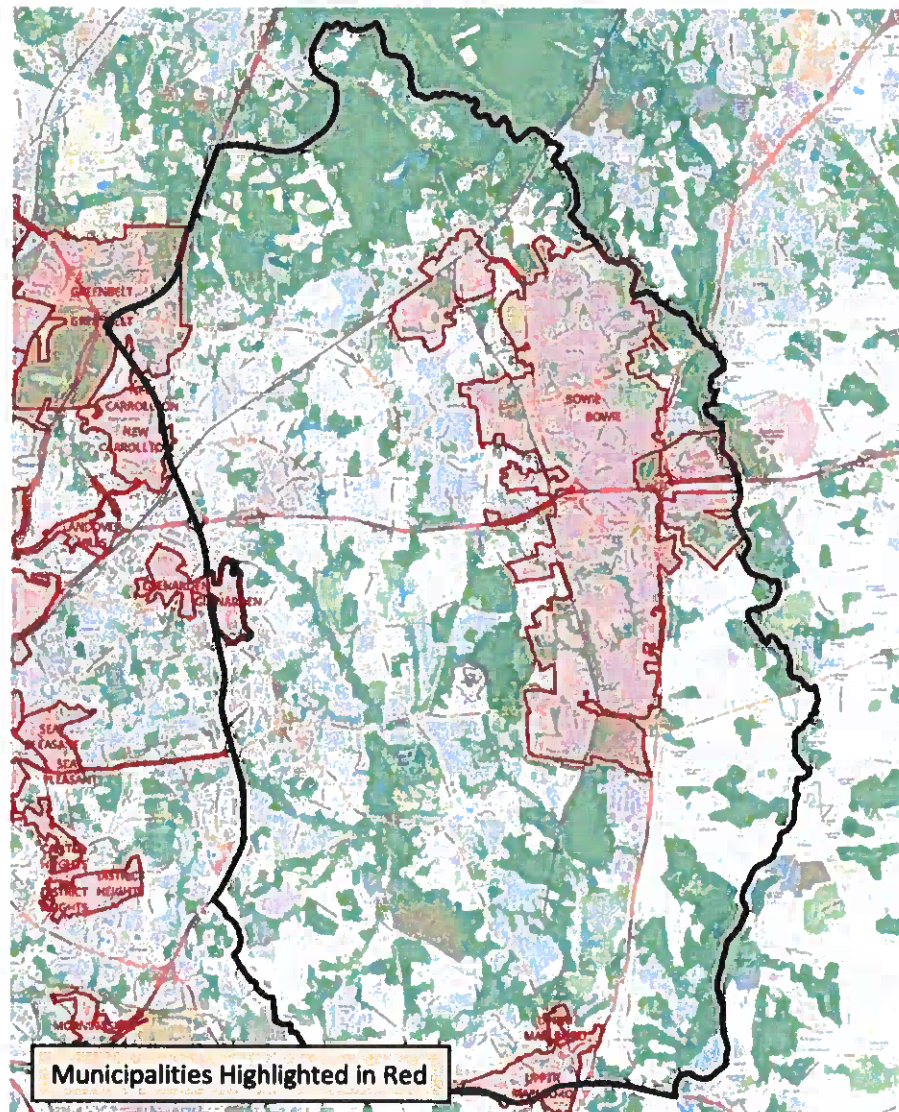

- Emergency Calls for Service: 8,759
- Average Response Time: 9:01 minutes
- Highest number of municipalities (15) with varying levels of municipal police service
- Largest population in a single police division, which causes:
 - Increased levels of traffic congestion
 - Challenging roadway infrastructure
 - Increased levels of active construction zones (i.e. Purple Line)
- University of Maryland Campus is the largest campus in the National Capital Region, which contributes:
 - The higher volume of traffic
 - Increased influxes of seasonal residential and commuter population

Estimated Travel Time Across Sector (J Sector & K Sector Averaged)⁵:

17 to 32 minutes

UNIQUE CHARACTERISTICS IMPACTING RESPONSE TIMES

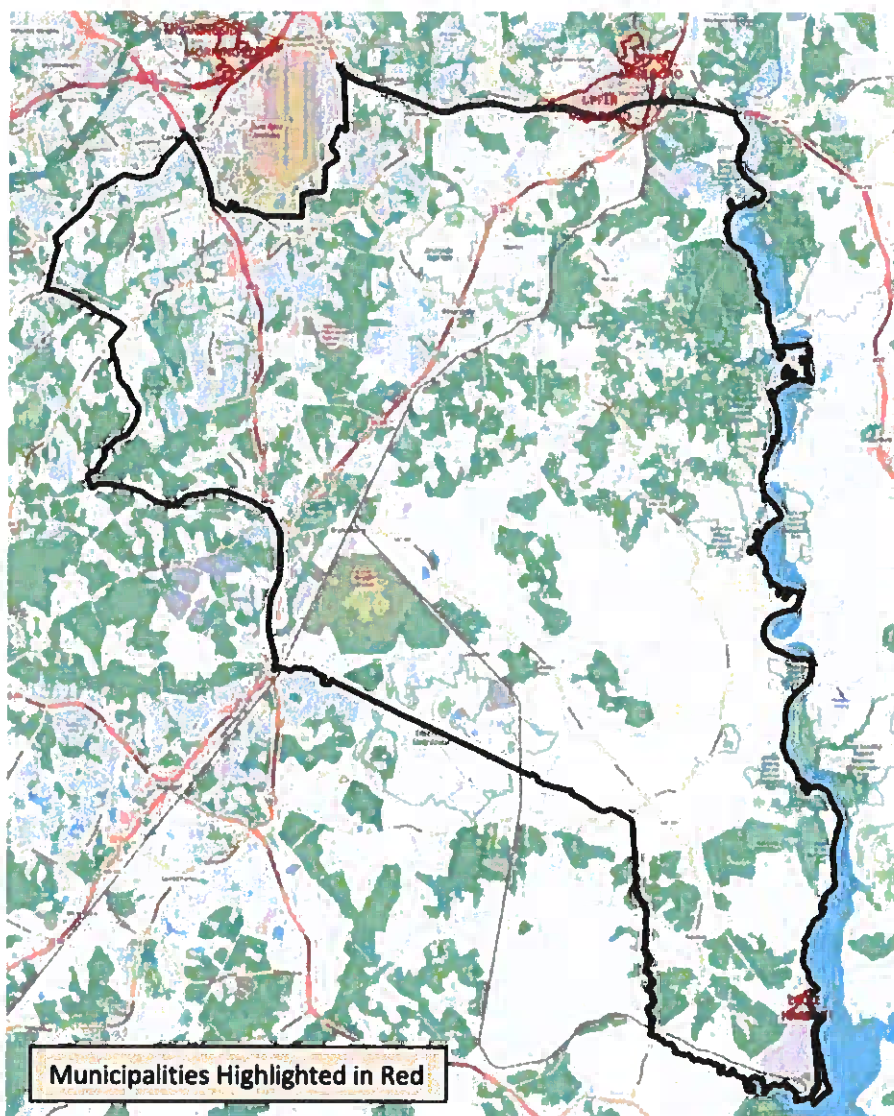

- Emergency Calls for Service: 7,675
- Average Response Time: 10:35 minutes
- Second largest number of emergency Calls for Service
 - Incidents often require higher number of additional resources, leaving less resources available for simultaneous incidents
- Proximity to Washington D.C. and Virginia
 - Large feeder roads (Rt. 210, Rt. 495, Rt. 5) with high volume of commuter traffic
 - Roadway infrastructure combined with traffic volume makes it difficult to traverse the Division
- Proximity to National Harbor
 - MGM Casino
 - Tanger Outlets
- Joint Base Andrews
 - Increased Calls for Service
 - Large volume of commuter traffic
